

One way to identify if you are running a terminal server is if you are accessing your clinical software via **Remote Desktop Connection**. Remote Desktop Connection is accessed using the icons shown in **Figure 1**, you will then be prompted to connect. Once connected you will see the blue bar shown in **Figure 2** at the top of your screen.

If you follow the step above you are likely running a terminal server environment. If you have any questions or concerns regarding terminal servers, please contact your IT support to confirm.
